

**Amendments to the Claims:**

This listing of the claims will replace all prior versions, and listings, of claims in the application:

**Listing of the Claims**

Claims 1-12. Canceled.

13. Screening grid for discharging solids from a liquid flow, the grid comprising a driveable screening strip that can be inserted into the liquid flow and comprising two lateral link chains between which carrying rods extend, the grid having screening links that at least partially have hooks whereby all screening links are divided into groups of adjacent screening links and with each group of screening links being arranged on two carrying rods independent of the preceding and subsequent group of screening links and with the screening links having projecting parts that extend past the carrying rods wherein all screening links have projecting parts that extend only in one direction from a group of screening links and without overlapping with projecting parts of the adjacent group of screening links.

14. Screening grid according to claim 13, wherein all screening links of a group are provided with projecting hooks on the outer side of the screening strip.

15. Screening grid according to claim 14, wherein the hooks are arranged on the projecting parts.

16. Screening grid according to claim 14, wherein the hooks are arranged on the center sections of the screening links that bridge the two carrying rods.
17. Screening grid according to claim 13, wherein at least one groups of screening links without hooks are arranged between groups of screening links with hooks.
18. Screening grid according to claim 13, wherein each projecting part is a sector that widens towards the inside of the screening strip whose arc center is arranged on the axis of the respective carrying rod.
19. Screening grid according to claim 13, wherein the screening links of adjacent groups are aligned.
20. Screening grid according to claim 13, wherein the screening links of adjacent groups are offset in relation to one another by half of the pitch of the screening links.
21. Screening grid according to claim 13, wherein the screening links are arranged directly adjacent to one another on the carrying rods and have lateral spacer sleeves.

22. Screening grid according to claim 13, wherein the adjacent screening links are separated by spacer sleeves.

23. Screening grid according to claim 13, wherein the carrying rods can be removed and replaced without interrupting the link chains.

24. Screening grid according to claim 13, wherein screening links with and without discharge hooks are alternately arranged on a carrying rod.
